Keywords: food, poison, effects, prevention

Abstract. The paper is an analytical review of cases of food poisoning and its attendant drawbacks on the lives of the people. Food-borne disease has been found to occur all over the world with staggering cases of illness, hospitalization and death. Bacteria, viruses and parasites are the causative organisms while, some toxic chemicals and genetically processed food can also be involved, it is recommended that a worldwide collaborative effort should be made to eradicate food-borne illnesses.
